

Preactor

The planning and scheduling system

Preactor is a scheduling package that aids small – medium businesses improve their scheduling and planning. Preactor can balance finite capacity of individual business processes against market place demand.

Preactor is based on individual manufacturing needs and demands. Whether your business has short deadlines for lots of jobs, or long deadlines for a range of jobs – Preactor is always on hand and efficient to tackle any scheduling issue.

The use of Preactor has reaped benefits for a number of businesses in a number of sectors, including;

- AIWA – an electronics company who used Preactor in Auto Insertion.
- Gunstones Bakery – used Preactor with SFJ's Core Enterprise system to schedule factory deliveries to dispatch vehicles.
- Cosworth – an auto mobile engineering company that has used Preactor to calculate "what if" scenarios, for unexpected ordering.

What are the benefits?

Preactor can take an entire database and menu system, and structure itself to the process needs and requirements of your business and your customers.

Using Preactor can cause great yields and greater efficiency in your manufacturing business, as scheduling jobs and managing lines makes products get to customers faster and more efficiently.

How can I find out more?

Preactor courses are available if you would like to find out more before committing to a system. To find out this and more about Preactor, please visit the Preactor website;

How can SFJ Systems get involved?

SFJ Systems is an approved Preactor implementer. We have over 15 years' experience of implementing Preactor in a number of different sectors and businesses, including the ones mentioned above.

SFJ Systems are no stranger to complex manufacturing and scheduling situations. We have experience in writing Preactor algorithms to suit any business loading requirement.

SFJ Systems also specialise in demand planning, forecasting and cost building systems – all of which can connect with Preactor. All of these systems are web – based and full integratable with any current systems that a business uses – including SAP.

SFJ Systems offer 24/7 support to clients and often have long standing contracts and relationships with clients as a result. SFJ is always on hand to give your business advice and support, from installation to the end of the order line.

To find out more about SFJ Systems, click through to our website for a consolidated list of our products – all integratable with Preactor.
